

Appl. No. 09/808,221  
Amdt. dated October 2, 2003  
Reply to Office Action of July 7, 2003

**Amendment to the Specification:**

Please replace the paragraph beginning at page 9, line 5, with the following rewritten paragraph:

 In creating the loop 26, the connecting member 12 is rotated into one or more twists 30. The number of twists 30 may vary depending on the desired consolidation of the loop 26, size of the aperture 28, and material density of the connecting member 12. The end 24 is secured to prevent the twists ~~28~~30 from unwinding to thereby ensure the placement of the twists ~~28~~30. The twists ~~28~~30 assist in defining the anchor aperture 28 by consolidating the connecting member 12 around the aperture 28. In this manner, the twists 30 strengthen the loop 26 and better allow the anchor aperture 28 to engage an anchor bolt.
